

Micro snowshoe TRAIL BLANC Snow running & hiking

Compact and flexible, it is the ultra-light solution for your hikes on snow. The support of the soft plates on snow added to the grip of the crampons allows a fast and fluid stride on fairly load-bearing snow, even on quite steep slopes when running or hiking uphill, across or downhill.
Weight : 200g a pair + micro-crampons not supplied : 300g to 500g

Fig. 1 : Mounting the TRAIL BLANC plates on your mini-crampons:

- Mount the mini-crampon on the shoe
- Place the Ø3 cord on the plate starting from the middle
- Pass the cord through the 8 chain links located on the edges of the sole without direct contact with the ground, halfway up the chain.
- Proceed from front to back following steps 1, 2 and 3 overleaf.
- Bend the plate progressively by tightening the cord
- Tie a stopper knot at the back of the plate (step 3)

Fig. 2 : Mounting with glacier hiking crampons:

For a maximum grip with ice crampons, and for alpine approach.

Place the plate on the crampon and put it on normally, the cord is then locked between the crampon and the sole of the shoe.
