

## Snowshoe HYBRID 3

Weight: 600g / 700g a pair S/M

Area: 21x39cm / 22x42cm

Ultra-light, versatile hybrid snowshoe. Can be used alone or with ice crampons. Compact design for a wide range of snow and terrain conditions. The shape and suppleness of the plates ensure a pleasant stride both uphill and downhill.

The TRAIL HYBRID is at home on all types of terrain, whether you're strolling through the snow with friends, approaching the Alps or snowboarding. Lightweight, it's no longer a problem to carry in your pack between seasons. The load-bearing capacity of size M snowshoes is similar to that of conventional snowshoes, with the added benefit of walking comfort and around 1kg less weight.

Fitting: cross the straps at the heel, then pass through the front strap.  
Ice crampons can be mounted under the snowshoe for maximum grip, as with the ALPI 2 model.

### Precautions for use:

SnowPlak snowshoes increase load-bearing capacity on loose snow, but should not be used on hard, frozen or excessively steep slopes.  
Use ice crampons alone when these are essential for safe mountaineering
