

## ALPI 3 for ice crampons

Weight : 400g a pair - Area : 23 x 36cm

The ALPI 3 is a very compact and lightweight snowshoe for mountaineering or rescue. Compatible with all ice crampons, it fits between the crampon and the boot.

Its lift is similar to the SnowPlak Approach with slightly less grip when traversing and descending. This clog shape is effective ascending and performs well in powder snow. Its flexibility provides a comfortable stride with a slight bounce. It is very easy to use.

### Fitting:

Place the ALPI.3 plate on the crampon and attach it to the boot. The plate is clamped between the boot and the crampon when locked. The position of the bar is adjustable according to shoe size.

To remove the ALPI 3, take off the crampons in a suitable place.

### Precautions of use :

SnowPlak snowshoes are only useful on soft or powder snow.  
Use crampons alone on hard snow and ice to ensure your safety.

Designed and produced in France by: SAS SNOWPLAK
